Jasmini Jena

AWS DevOps Engineer

Hyderabad, Telangana | 7064220366 | jasminjena97@gmail.com | linkedin.com/in/jasmini-jena

PROFESSIONAL SUMMARY

AWS DevOps Engineer with **5+ years of experience** designing, automating, deploying, and supporting scalable cloud infrastructure and production platforms. Strong hands-on experience with **AWS, Terraform, Kubernetes, EKS, Docker, Jenkins, GitHub Actions, Git, CI/CD, Linux, Python, and Bash**.

Experienced in building **AWS migration automation platforms**, orchestrating enterprise VM migrations using **AWS Step Functions, Lambda, EventBridge, DynamoDB, AWS MGN, Terraform, and GitHub Actions**. Strong background in containerized application deployments, production troubleshooting, monitoring, incident management, root cause analysis, cloud cost optimization, and high-availability architecture.

Experienced in **Azure-to-AWS migration, infrastructure automation, CI/CD modernization, Kubernetes operations, observability, multi-environment deployments, and production support**. Hands-on exposure to **GenAI, prompt engineering, MCP, and agent-driven DevOps automation**.

TECHNICAL SKILLS

- **Cloud & AWS:** AWS, EC2, EKS, ECS, S3, RDS, VPC, IAM, Route 53, CloudFront, ECR, Lambda, Step Functions, EventBridge, DynamoDB, CloudWatch, Secrets Manager, Systems Manager, AWS MGN, NLB, ALB, Auto Scaling, AWS CLI
- **Infrastructure as Code:** Terraform, AWS CloudFormation
- **CI/CD & DevOps:** Jenkins, GitHub Actions, Bitbucket Pipelines, Git, GitHub, Docker, Maven, SonarQube, Fortify
- **Containers & Orchestration:** Kubernetes, Amazon EKS, Amazon ECS, Docker, Helm
- **Monitoring & Observability:** Amazon CloudWatch, Prometheus, Grafana, Site24x7, Datadog
- **Migration & Automation:** Azure-to-AWS Migration, AWS Application Migration Service (MGN), Migration Factory, VM Migration, Migration Runbooks, PowerShell, Bash, Python, AWS Systems Manager, Azure Run Command, WinRM, SSH
- **Streaming & Data:** Apache Kafka, Logstash, Elasticsearch, RabbitMQ, PostgreSQL, MySQL
- **Networking:** VPC, TCP/IP, DNS, Route 53, NLB, ALB, Firewall Rules, East-West Traffic Analysis, Subnet CIDR, Ports & Protocols, OSI Model Troubleshooting
- **Operating Systems:** Linux, Ubuntu, CentOS, Red Hat Enterprise Linux, Windows Server
- **AI & GenAI:** Generative AI, Prompt Engineering, AWS Kiro, Model Context Protocol (MCP), AI Agents, Agentic DevOps Automation
- **Web & Application Platforms:** Apache, NGINX, IIS, Strapi CMS

PROFESSIONAL EXPERIENCE

DevOps Engineer – EPAM Systems *January 2026 – Present | Hyderabad, India*

- Built an automated **Azure-to-AWS and VMware-to-AWS migration engine** using **GitHub Actions, AWS Step Functions, Lambda, EventBridge, DynamoDB, and AWS MGN** to orchestrate repeatable VM migration workflows.
- Provisioned and managed migration infrastructure using **Terraform**, including IAM, DynamoDB, EventBridge, Lambda, and Step Functions.
- Designed automated migration runbooks covering **source preparation, MGN agent installation, replication, validation, cutover, post-migration verification, and rollback workflows**.
- Automated source VM preparation and AWS MGN agent installation using **PowerShell and Bash** through Azure Run Command, WinRM, SSH, and AWS Systems Manager.
- Implemented **Step Functions orchestration** for sequential migration execution, validation, readiness checks, reboot handling, and SSM-based post-migration operations.
- Built Lambda-based validation and execution workflows using **Python, DynamoDB, and CloudWatch** for migration status tracking, validation, and failure handling.
- Designed **East-West and Firewall-19 connectivity requirements** by analyzing application communication flows, source/destination IPs, subnet CIDRs, ports, protocols, and required network paths.
- Created migration architecture and operational documentation covering **Solution Impact Gateway (SIG), target AWS architecture, migration methodology, validation, cutover, rollback, and hypercare**.
- Worked on enterprise cloud migration automation with focus on **repeatability, idempotency, production reliability, operational visibility, and reduction of manual migration effort**.
- Architected an **AI-driven CI/CD modernization platform** using **Model Context Protocol (MCP) and specialized AI agents** to analyze Jenkinsfiles and automate migration to GitHub Actions and GitLab CI.
- Implemented agent-driven analysis, validation, and remediation workflows to identify CI/CD migration blockers before code changes are committed.
- Used **GitHub Actions, Terraform, Python, AWS Lambda, Step Functions, and event-driven architecture** to build production-oriented automation workflows.

DevOps Engineer – Zen3 IT Solutions *April 2024 – January 2026*

- Designed and maintained **CI/CD pipelines** for Dev, UAT, and Production environments using **Jenkins and Bitbucket Pipelines**.

- Built and deployed containerized applications using **Docker**, with images stored in **Amazon ECR**.
- Deployed and operated production workloads on **Amazon EKS**, implementing Kubernetes-based orchestration, scaling, and fault-tolerant application deployments.
- Configured **Apache Kafka brokers behind Network Load Balancers (NLB)** for high-throughput data ingestion from external providers.
- Integrated **Logstash and Elasticsearch** for data processing, indexing, and application data retrieval.
- Implemented secure runtime secret retrieval using **AWS Secrets Manager** for payment-related application components.
- Deployed and maintained production observability using **Site24x7 and Datadog**, contributing to **99.9% application uptime**.
- Performed AWS infrastructure optimization and instance rightsizing, achieving approximately **10–15% AWS cost reduction**.
- Troubleshot production infrastructure, application, networking, deployment, and Kubernetes issues and performed **root cause analysis**.
- Managed Linux environments, Docker workloads, CI/CD pipelines, and AWS cloud infrastructure across multiple environments.

DevOps Engineer – Cigniti Technologies *March 2022 – September 2023*

- Containerized microservices using **Docker** and deployed workloads on **Amazon ECS and Amazon EKS**.
- Designed and implemented Kubernetes observability using **Istio, Prometheus, and Grafana**.
- Automated application deployments using **Jenkins, GitHub Actions, and AWS CodeDeploy**.
- Managed **Amazon Route 53** configurations for latency-based and failover routing.
- Administered **Linux and Windows Server** environments and application/web servers including Apache, NGINX, and IIS.
- Integrated **Jira and Bitbucket** to streamline source-code management and issue-tracking workflows.
- Supported production deployments, troubleshooting, infrastructure monitoring, and operational activities across cloud environments.

DevOps Intern – Amazon *August 2021 – March 2022*

- Automated AWS infrastructure deployment using **AWS CloudFormation and AWS CLI**.
- Designed EC2-based architectures with focus on **high availability, security, and operational reliability**.
- Developed and deployed **AWS Lambda** functions for cloud automation.
- Built monitoring dashboards using **Prometheus and Grafana**.
- Conducted technical knowledge-sharing and mentoring sessions for team members.

KEY PROJECT

Dynamic Teletex — AWS-Based Travel Platform

Technology Stack: AWS EKS, EC2, RDS, S3, ECR, Secrets Manager, Route 53, CloudFront, Kafka, Logstash, Elasticsearch, RabbitMQ, Docker, Bitbucket Pipelines, Strapi CMS, Site24x7, Cloudflare

- Developed and supported a scalable travel and booking platform using **Amazon EKS and Docker-based microservices**.
- Built **Kafka-based real-time data pipelines** behind NLB for ingestion from external hotel and flight providers.
- Configured **Logstash** to process application and provider data and integrate with Elasticsearch for structured search and retrieval.
- Implemented **RabbitMQ** for inter-service asynchronous communication.
- Used **Strapi CMS** for dynamic content management.
- Integrated **AWS Secrets Manager** to securely retrieve and decrypt sensitive payment-related information at runtime.
- Automated application delivery using **Bitbucket Pipelines**, following a build → ECR → EKS deployment workflow.
- Implemented **zero-downtime deployment practices** for production workloads.
- Configured **CloudFront, Route 53, and Cloudflare** for secure global application delivery, DNS, and CDN capabilities.
- Implemented application and infrastructure monitoring using **Site24x7**, contributing to **99.9% uptime**.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate *Validity: 18 March 2026 – 18 March 2029*
- Claude Certified Architect – Foundations *Validity: 13 August 2026 – 13 August 2027*

EDUCATION

B.Tech – Electronics and Telecommunication Engineering, Biju Patnaik University of Technology (BPUT), Odisha *2020*

CORE COMPETENCIES

AWS Cloud Engineering • AWS DevOps • Cloud Migration • Infrastructure as Code • Terraform • CI/CD Automation • Kubernetes • Amazon EKS • Docker • GitHub Actions • Jenkins • Python Automation • Linux Administration • Production Support • Incident Management • Root Cause Analysis • Monitoring & Observability • Cloud Cost Optimization • Platform Engineering • Site Reliability • Infrastructure Automation • Azure-to-AWS Migration • AI-Assisted DevOps • Agentic Automation
